Topic: College education
Objectives:
1. To understand how the value of college education has changed and is continuing to change over time.
2. To assess individual decision-making processes.
3. To gain an overall perspective on what New Yorkers/Americans think of college education today.

Preamble text: Now we have a few questions about education.

[SRIq1] Compared to 10 years ago, do you think the overall societal pressure to attend college has increased, decreased, or remained the same?
(College includes 2-year degree programs and 4-year degree programs. It does NOT include vocational or technical programs.)
        <1> Increased greatly
        <2> Increased slightly
        <3> Remained the same [SKIP to SRIq3]
        <4> Decreased slightly

Topic: I would like to include several questions about economic integration in schools. These questions have already been vetted by SRI because they were included in the 2016 CNSS, and revised through that process. I would like to include them in the ESP to gather more data on the same topic, and to take advantage of the more reliable county indicator in the ESP (as opposed to the CNSS).

[KBq1] Studies show that families are more residentially separated by income now than they were 40 years ago. In your opinion, how important is it that children attend school with students from a wide range of economic backgrounds?

        <1> Not important at all
        <2> Somewhat important
        <3> Important
        <4> Very important
        <5> Extremely important
        <d> Do not know
        <r> Refused

[KBq2] I am now going to ask how likely you would be to support two different local education policies: First, suppose your local school district wants to assign children to schools in a way that ensures that children from a range of different income levels attend each school. In other words, the policy would create mixed-income public schools. Some children would attend the school closest to where they live, while others would not. Students in the public school system would be required to attend the school to which they are assigned.

How likely would you be to support this initiative?

        <1> Not likely at all
        <2> Somewhat likely
        <3> Likely
        <4> Very likely
        <5> Extremely likely
        <d> Do not know
        <r> Refused

Cornell University

[KBq3] Second, suppose that your local school district wants to open one or more magnet schools. Magnet schools are choice-based public schools that do not draw from a specific geographic attendance area. Admissions decisions would be made, in part, based on family income to ensure that each magnet school enrolled children from a range of income levels. In other words, the policy would create mixed-income magnet schools. Enrollment in these schools would be strictly voluntary.
How likely would you be to support this initiative?

        <1> Not likely at all
        <2> Somewhat likely
        <3> Likely
        <4> Very likely
        <5> Extremely likely

[KBq4] Which of the following choices best describes your children's K-12 schooling? If you have children who have not yet started Kindergarten, please indicate your plans for their schooling.

        <1> My children attend public school
        <2> My children attend private school or are homeschooled
        <3> I have some children who attend public schools and others who attend non-public schools
        <4> I have children who are no longer in K-12 schooling
